

Energy savings for the makers.

PSE&G can help manufacturing facilities lower energy costs.

MANUFACTURING

No matter what you manufacture, it takes energy to make it. With valuable incentives available, from rebates to interest-free repayment options, PSE&G can guide manufacturing facilities to make the right decisions to optimize efficiency, reduce energy use, and maximize savings.

Upgrade different facets of *your facility*:

Refrigeration and Cooling

- ✓ Upgrade to newer, high-efficiency refrigeration equipment to preserve food, pharmaceuticals, and other temperature-sensitive or perishable materials.

LED Lighting

- ✓ Replace lower-efficiency lighting fixtures with new energy-efficient LED fixtures and install lighting sensors that automatically dim and brighten as people move through the facility.

Heating and Cooling Systems

- ✓ Maintain HVAC equipment by cleaning out air ducts and changing clogged filters, or install upgraded models to create the ideal climate situation for every corner of your facility.

Energy efficiency measures from PSE&G can help make your projects cost-effective and hassle-free. If you need to reduce operating costs or you're planning a major renovation, PSE&G is the trusted expert for all your energy upgrades.
