

Attention, savers!

PSE&G helps grocery and retail stores conserve energy.

Saving energy saves money, and every cent counts when your business operates in an oversized space. With high ceilings, industrial-size coolers, and bright lights to showcase products in your business, you need to find the right balance of preserving perishables, customer and employee comfort, and energy-saving opportunities. PSE&G can help large facilities like yours make the right decisions to optimize efficiency, reduce energy use, and maximize savings.

Ways you can *save*:

LED Lighting

- ✓ Replace lower-efficiency lighting fixtures with new energy-efficient LED fixtures and install lighting sensors that automatically dim and brighten as people move through the store.

Heating and Cooling Systems

- ✓ Maintain HVAC equipment, including cleaning out air ducts and changing clogged filters. Install upgraded and energy-efficient HVAC systems and smart thermostats to create the ideal climate situation for every corner of your store.

Refrigeration and Cooling

- ✓ Upgrade to newer, high-efficiency refrigeration equipment to protect temperature-sensitive or perishable products.

PSE&G provides options for retailers to reduce energy use and maximize savings, which you can pass on to your customers. Plus, our interest-free on-bill repayment option allows you to pay back costs not covered by incentives over time, letting you concentrate on creating a better environment for shoppers and employees.
